# 6<sup>th</sup> Task SUBMISSION REPORT OF ELEVATE LABS CYBERSECURITY INTERNSHIP

NAME	ADARSH SHARMA
Submitted to:	Elevate Labs
Name of the Academic Institute	Ganpat University

# REPORT SUBMITTED TO

As part of the Cyber Security Internship, I have completed "Task 6<sup>th</sup>: Create a Strong Password and Evaluate Its Strength" by following all steps as instructed. Below is a detailed summary of each step followed during the task:

### Task 4 Report: Create a Strong Password and Evaluat Its Strength

### Objective

To create a strong password using best practices in cybersecurity, evaluate its strength using online tools, and understand how complexity contributes to password security.

### **Step-by-Step Task Execution**

1 Create multiple passwords with varying complexity.

Password	Complexity Level
password123	Weak
Passw0rd	Moderate
P@ssw0rd!	Strong
QwErTy2025	Moderate
G!9x#1zB\$vK8	Very Strong
aB3!cD5#EfGhIjKl	Extremely Strong

2 Use uppercase, lowercase, numbers, symbols, and length variations. Each password varies by:

- Length (from 8 to 16+ characters)
- Character types:
  - Uppercase (A–Z)
  - Lowercase (a–z)
  - Numbers (0–9)
  - Symbols (!@#\$%^&\*)

3 Test each password on password strength checker.

#### Use online tools like:

- <u>HowSecureIsMyPassword.net</u>
- Password Monster
- NordPass Strength Checker
- passwordmeter.com

	Test	t Your Password		Minir	num Require	ments	
Password:  Hide:  Score:  43%  Complexity: Good			Minimum 8 characters in length     Contains 3/4 of the following items:     Uppercase Letters     Lowercase Letters     Numbers     Symbols				
Add	ditions			Туре	Rate	Count	Bonus
<b>3</b>	Number of	Characters		Flat	+(n*4)	11	+ 44
8	Uppercase Letters		Cond/Incr	+((len-n)*2)	0	0	
<b>3</b>	Lowercase	Letters		Cond/Incr	+((len-n)*2)	8	+ 6
<b>3</b>	Numbers		Cond	+(n*4)	3	+ 12	
8	Symbols			Flat	+(n*6)	0	0
<b>3</b>	Middle Numbers or Symbols		Flat	+(n*2)	2	+4	
8	Requirements		Flat	+(n*2)	3	0	
Deductions							
<b>Ø</b>	Letters Only		Flat	-n	0	0	
<b>②</b>	Numbers O	nly		Flat	-n	0	0
<u></u>	Repeat Cha	racters (Case Insensitive)		Comp	-	2	- 2
<b>Ø</b>	Consecutive	e Uppercase Letters		Flat	-(n*2)	0	0
<b>(l)</b>	Consecutive	e Lowercase Letters		Flat	-(n*2)	7	- 14
<u>(l)</u>	Consecutive Numbers			Flat	-(n*2)	2	- 4
<b>②</b>	Sequential Letters (3+)		Flat	-(n*3)	0	0	
<u>(l)</u>	Sequential Numbers (3+)		Flat	-(n*3)	1	- 3	
<b>②</b>	Sequential Symbols (3+)		Flat	-(n*3)	0	0	
Legend							
<ul> <li>Exceptional: Exceeds minimum standards. Additional bonuses are applied.</li> <li>Sufficient: Meets minimum standards. Additional bonuses are applied.</li> <li>Warning: Advisory against employing bad practices. Overall score is reduced.</li> </ul>							

**Solution** Failure: Does not meet the minimum standards. Overall score is reduced.

Test Your Password		Minimum Requirements		
Password:		<ul> <li>Minimum 8 characters in length</li> <li>Contains 3/4 of the following items:</li> </ul>		
Hide:	<b>▽</b>	- Uppercase Letters		
Score:	100%	<ul><li>Lowercase Letters</li><li>Numbers</li></ul>		
Complexity:	Very Strong	- Symbols		

Additions		Туре	Rate	Count	Bonus
<b>3</b>	Number of Characters	Flat	+(n*4)	12	+ 48
<b>③</b>	Uppercase Letters	Cond/Incr	+((len-n)*2)	3	+ 18
<b>3</b>	Lowercase Letters	Cond/Incr	+((len-n)*2)	3	+ 18
<b>3</b>	Numbers	Cond	+(n*4)	3	+ 12
<b>3</b>	Symbols	Flat	+(n*6)	3	+ 18
<b>3</b>	Middle Numbers or Symbols	Flat	+(n*2)	5	+ 10
<b>3</b>	Requirements	Flat	+(n*2)	5	+ 10
De	ductions				
<b>②</b>	Letters Only	Flat	-n	0	0
<b>Ø</b>	Numbers Only	Flat	-n	0	0
<b>Ø</b>	Repeat Characters (Case Insensitive)	Comp	-	0	0
<b>Ø</b>	Consecutive Uppercase Letters	Flat	-(n*2)	0	0
<b>Ø</b>	Consecutive Lowercase Letters	Flat	-(n*2)	0	0
<b>Ø</b>	Consecutive Numbers	Flat	-(n*2)	0	0
<b>Ø</b>	Sequential Letters (3+)	Flat	-(n*3)	0	0
<b>Ø</b>	Sequential Numbers (3+)	Flat	-(n*3)	0	0
<b>Ø</b>	Sequential Symbols (3+)	Flat	-(n*3)	0	0
Legend					
<ul> <li>Exceptional: Exceeds minimum standards. Additional bonuses are applied.</li> <li>Sufficient: Meets minimum standards. Additional bonuses are applied.</li> <li>Warning: Advisory against employing bad practices. Overall score is reduced.</li> <li>Failure: Does not meet the minimum standards. Overall score is reduced.</li> </ul>					

#### 4 Note scores and feedback from the tool.

Password	Estimated Crack Time	Feedback
password123	< 1 second	Very weak, too common
Passw0rd	A few minutes	Better, but still guessable
P@ssw0rd!	Hours to days	Stronger due to symbol & case mix
QwErTy2025	Hours	Predictable pattern
G!9x#1zB\$vK8	Billions of years	Very strong
aB3!cD5#EfGhIjKl	Practically uncrackable	Excellent – long, random, mixed

#### 5 Identify best practices for creating strong passwords.

- Use at least 12–16 characters
- Include upper & lower case, numbers, symbols
- Avoid dictionary words or common patterns
- Do not reuse passwords across accounts
- Consider using a password manager
- Enable 2-Factor Authentication (2FA) when possible

### 6 Write down tips learned from the evaluation.

- Longer passwords are significantly harder to crack.
- Randomness is more secure than predictable patterns.
- Combining unrelated words or using passphrases can be effective.
- Avoid personal info (birthdays, names) in passwords.
- Even a small change (like adding a symbol) can exponentially increase security.

### 7 Research common password attacks (brute force, dictionary).

Attack Type	Description
Brute Force	Tries all combinations of characters until it guesses the password
Dictionary	Uses a list of common passwords and words to guess the password
<b>Credential Stuffing</b>	Uses stolen username/password combinations from previous breaches
Phishing	Tricks users into revealing passwords through fake websites or emails
Keylogging	Records keystrokes to steal passwords

### 8 Summarize how password complexity affects security.

- Simple passwords (short, common words) are easily cracked in seconds by brute force or dictionary attacks.
- Complex passwords (long, random, with symbols and case variation) may take billions of years to break with current technology.
- Complexity = Security: The more complex and unique your password, the less likely it will be compromised.
